Static RE – Vegas

Answer and **explain** how you solved:

1. What functions do main() call, what are their addresses and what are their parameters?
2. How do we win the game?

You may execute the program if needed, but it is not crucial for solving.

You may use any x86 assembly reference you have if needed.

You may use any scripting language if needed, but attach your script or paste it in your report.

You are required to attach your .idb file.

Good luck! 😊
